EDUCATION

City University of Hong Kong

Bachelor of Science in Computer Science

Hong Kong SAR

Aug 2023 – Jun 2027

- Full tuition scholarship recipient
- CityU CS Student Chapter – Events director
- Website developer for City University HK's Social and Behavioural Sciences Department
- Accepted for **Bloomberg** GBA Fintech Talent Initiative (Top 50), paired with **HKEX** and **Fubon Bank**

EXPERIENCE

Incoming Apprentice

UBS

Starting May 2026

Hong Kong SAR

- Tomorrow's Talent Program: Technology

Placement Programmer

Hospital Authority

Aug 2025 – Present

Hong Kong SAR

- Executed weekly **SQL view migrations** and controlled data updates across development, testing, and production servers for **40+** hospital departments using **Bash** automation, **PuTTY-based Linux** workflows, and deployment validation, cutting update downtime by **50%** and reducing release errors by **10%**.
- Developed and tested **Java Spring Boot REST** endpoints, SQL queries, and stored procedures for the integration of generative AI into patient report generation, enabling secure backend connectivity across **Oracle/PostgreSQL** systems, API gateway services, and **LLM** components; validated **30+** endpoints in **Postman**, flagging failed and non-responsive API responses during **integration testing**.
- Wrote and deployed **500+** SQL scripts to standardize clinic naming conventions across **1.3M+** patient records for **70+** medical facilities, and investigated **SAS server** and **ETL workflow** issues through **log analysis** across mirrored server environments, improving data pipeline stability and shortening incident resolution time by **35%**.

Research Assistant

City University of Hong Kong

Aug 2025 – Present

Hong Kong SAR

- Developing and benchmarking a **deep-learning** pipeline to predict enzyme optimum pH from sequence under Prof. Ka-Chun Wong, including dataset curation, protein-LM embeddings, and a **PyTorch/MLflow** setup.

Full-stack Development Intern

PerformVE Limited

Jun 2024 – Aug 2024

Hong Kong SAR

- Developed internal software for The Neighborhood Advice-Action Council (NAAC) and a clinic, writing nearly **20k** lines of code. Delivered completed web applications that boosted organizational efficiency by **50%** and **90%**, respectively.
- Designed and optimized **25+** webpages using **React** and **TypeScript**, introducing dynamic components and conditional logic that reduced form completion time from 10 minutes to **under 3**, enhancing user experience.
- Integrated **RESTful APIs** with **MongoDB** using **Axios**, improving error handling and securing medical data with **JWT authentication** and **encryption**. This reduced form rejections by **30%**, data transmission errors by **40%**, and ensured HIPAA compliance.
- Resolved critical API and database integration challenges, utilizing **Git version** control and error handling with the team. Also, planned and executed importing React tables to Excel through collaboration on a **custom API**.

PROJECTS

Fullstack API vulnerability scanner | *React, FastAPI, PostgreSQL, Docker, JWT*

[demo](#)

- Inspired by **OWASP Top 10** with four checking modules (**rate limit**, **auth**, **SQLi**, **IDOR**) with throttling, retries, and time-based detection protected with **JWT** auth and **SlowAPI** rate limits, displayed on a TS dashboard.
- Deployed with **Docker** with **repository/service/route layering** and **Pydantic** validation

Morgan Stanley Code to Give Top 10 | *React Native, FastAPI, Supabase, Hugging Face, Docker*

[demo](#)

- Full-stack educational **mobile** platform delivering **gamified learning** experience with **token economy**, **real-time messaging**, and **progress analytics** that increased parent-child educational engagement.
- **Independently** integrated AI-powered screenshot explanation feature using Hugging Face's **Qwen2.5-VL-7B-Instruct** vision-language model with **FastAPI microservices backend**, enabling intelligent UI assistance through **computer vision** and **natural language processing** that improved user on-boarding and feature discovery.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML/CSS, Bash

Frameworks/Libs: React, TypeScript, Node.js, Flask, Bootstrap, Spring Boot, React Native, FastAPI, PyTorch, TensorFlow, NumPy, Pandas, Matplotlib, Pydantic, SQLAlchemy

Developer Tools: Git, JWT, MongoDB, PostgreSQL, Oracle, Heroku, Docker, Supabase, AWS, nginx, PowerBI, Apache Spark, Hadoop
